Internal Merchandising Solution

Universal Tray

Part Number: 206134

The universal tray fits inside each dispenser "bay" which acts as the housing unit to store and dispense packet and roll your own tobacco stock. A pair of side fins are required to support each tray. The tray slides into side fins in either gravity or push-feed position as shown below.

Universal Side Fin

Part Number: 206640

The universal side fin is positioned to the inside face of the dispenser bays and provides a point of support for the tray. Side fins come pre-installed and affixed to the dispenser in the correct position. Trays can then be installed by the retailer either in the push-feed or gravity fed position.

Universal Tray Dividers

Part Number: 206637

Universal tray dividers are provided as a division between stock variants within the tray. They are clear plastic dividers that simply clip in the back of the tray and the back of the plastic tray front. They act as a device to help merchandise the tray and separate the packets and packet sizes in each tray. Made from polycarbonate, they are durable and can flex into position without removing other parts of the tray system. This makes changing products easy and less time consuming for the retailer.

Universal Tray Fronts

Part Number: 215287

Tray fronts are designed to clip into the front of the tray to prevent stock from falling forward. They are also the primary pricing point and the data strip is supplied affixed to the tray front for pricing to be inserted.

Universal Tray Extrusion Cover Gravity Feed (Retail Display Ban)

Part Number: 206979

The universal tray extrusion cover (GRAVITY FEED) is required for retail outlets that do not want the RDB door solution. The plastic extrusion cover can act as an alternate RDB solution other than the door. The extrusion cover is supplied with pricing data strip affixed to the front of the cover. The cover is attached to the bottom of each tray to stop visibility of product and adhere to Retail Display Ban legislation. This product is only necessary if doors are not the desired solution.

Universal Tray Extrusion Cover Push Feed (Retail Display Ban)

Part Number: 206978

The universal tray extrusion cover (PUSH FEED) is required for retail outlets that do not want the RDB door solution. The plastic extrusion cover can act as an alternate RDB solution other than the door. The extrusion cover is supplied with pricing data strip affixed to the front of the cover. This product is only necessary if doors are not the desired solution and the tray system is set up in the Push Feed position.

Universal Push-Feeds

Part Number: RPI-PH1235

Universal push-feeds are provided when the trays are specified by the retail to be set-up in the “push-feed” position. The push feed pushes stock to the front of the tray with a tensioned spring. A different divider system is required if the tray is set-up in push-feed. The push-feed tray system set up is shown in the diagram below.

Universal Divider Push Feed

Part Number: RPI-D1130

The push feed tray requires a different divider system to the GRAVITY FEED tray.

Universal Divider Push Feed End Divider

Part Number: RPI-D1130E

The Push Feed tray also requires an End Divider. See below diagram of the push feed tray system and divider system.

Universal Front and Rear Track for Pusher System

Part Number: 206980

The track is required for the front and rear of the tray for the pusher and divider system to clip in to position.
